- ASC is a specialist machine supplier when it comes to **Mining sweepers and scrubbers**. ASC sweepers are designed to perform exceptionally well when picking up all kinds of dust & grime.

ASC is a specialist machine supplier when it comes to Mining sweepers and scrubbers. ASC sweepers are designed to perform exceptionally well when picking up all kinds of dust & grime.

Typical material our mining sweepers are designed to pick up include coal, aluminium, steel, lead, bauxite, copper concentrate and cement. Whether its sweeping 40 kilometres of roadways in remote outback locations or maintaining large plants we have varying size machines that can fit almost any application.

The ASC machines are designed to work dust free eliminating hazardous dust and have proven successful in mine sites all across the world. The majority of mine sites in Australia now use ASC sweepers and scrubbers on a daily basis to maintain their facilities.

ASC machines are reliable and simple to maintain and sizes of sweepers vary from small walk behind sweepers to large capacity dustless mining approved street sweepers. The ASC machines achieve PM10 dust control emissions.

ASC also has heavy duty wet scrubbers that are designed to pick up grease, oil, grime and spills.

ASC mine sweepers and scrubbers can be used to clean warehouses, production facilities, washing rooms and aisleways. They are designed to and work well on painted floors, concrete and bitumen surfaces.

■ Our Australian Sweeper Company machines are **9 to 124 times faster** than manual sweeping and have the lowest sweeper running costs in the industry.

Once cleaned the surfaces are clean, dust free and dry. The average lifespan of an ASC product is 12 to 20 years in normal heavy duty applications. This ensures a buyer with a sound investment that actually works.

ASC mine sweepers and scrubbers come in a variety of models & are available in different power options including battery, LPG or diesel variants.

Please contact us for further information and onsite demonstrations.

asc
DESIGNED TO CLEAN.
BUILT TO LAST

For over 30 years ASC has supplied to Australian mining sites **nationwide**. Specific Mine sites are arguably the hardest facilities to clean.

Mining includes the mining and extraction of raw materials like Alumina, Lead, Coal, Iron O, Zinc, Bauxite and many different grades of cement like cement.

The challenges with sweeping this type of material is that it is exceptionally light and very hard to sweep without getting dust airborne.

With modern and very stringent air quality levels in place today on Mine sites, one of the most challenging decisions for both Mining Managers and Superintendents is "what machine do I buy".

With a myriad of choices to choose from when searching the internet, that decision can be quite confusing.

If you get it wrong, that decision can have consequences.

One thing to really take note of when investing in a Mine application sweeper or scrubber is that the machine must be designed and proven to work in such harsh conditions.

More often than not machines that are designed for the supermarket or warehousing sector find their way into these applications only to prove both unreliable and unfit for purpose.

These machines create more mess and leave major dust trails.

Thankfully ASC has an array of mine specific machines that can cover any mine site.

■ The machines are designed on an **Industrial heavy duty platform** & engineered to be used day and night with multiple shift operation.

Moreover, they are easy to maintain and have proven drive train.

Well known engines like **Kubota, Eaton Hydraulics** & few electronics are used to ensure reliability and ease of maintenance on all ASC machines

All **ASC machines** feature proven "**clean technology**" dust suppression systems to ensure air quality levels are maintained whilst on operation.

For reference ASC sweepers are currently used by the major mining companies operating in Oceania including the likes of Alco, Boral, CSR, Alcan, Rio Tinto, BHP, FMG and Thiess to name but a few.

Should you be in the market for a reliable, heavy duty, built for purpose mine sweeper or scrubber, ASC can provide the solution risk free.

Please contact us for further information and onsite demonstrations.
